

ROBERT STEWART

Full-Stack Software Engineer | Council Bluffs, IA | 402-595-0211 | rms.dev@outlook.com
robert-stewart.dev | github.com/rs691 | linkedin.com/in/robert-stewart-m

PROFESSIONAL SUMMARY

Full-stack software engineer who designs and operates multi-tenant production systems end to end, including mobile clients, REST and real-time backends, admin tooling, CI/CD pipelines, and AWS cloud infrastructure. Ships platforms live on the App Store and Google Play, with tenant isolation and role-based security built into every layer, plus hands-on experience integrating AI/LLM features into production applications. Comfortable across the stack, from legacy CRUD applications and infrastructure migrations to event-driven services and multi-agent orchestration. Currently pursuing an M.S. in Data Science to deepen that systems-thinking further.

TECHNICAL SKILLS

Languages: Python, Java, C#, Dart, TypeScript, JavaScript, SQL, HTML/CSS

Frontend: React, Next.js, Flutter, Vue.js, HTMX, Tailwind CSS

Backend: Node.js, Express, Django, ASP.NET, REST APIs, WebSockets / Socket.io

Cloud & DevOps: AWS (ECS, Lambda, RDS), Azure, Docker, GitHub Actions, CI/CD, Vercel

Database: PostgreSQL, MySQL, SQL Server, Redis, Firestore, Supabase

AI Engineering: Gemini API, multi-agent orchestration, event-driven AI systems, LLM integration

Testing: Jest, React Testing Library, Flutter Test, Postman

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer | Dec 2025 - Present

NE Innovation Labs - Omaha, NE

- Architected shared Flutter applications for iOS and Android with unified JWT/OAuth authentication across multiple backend services, deep-link QR workflows, and reusable mobile architecture.
- Built a multi-tenant Node.js/Express platform powering three products (Chamberopoly, Bingo, Game Builder), with organization-scoped role-based access control and Google, Microsoft, and Apple OAuth across multiple mobile clients.
- Designed idempotent, REST-authoritative workflows for real-time events such as QR scan completion and blackout detection, using Socket.io push-after-commit updates to keep admin and player interfaces consistent under concurrent load.
- Implemented Firebase A/B Testing with notifications and in-app messaging to evaluate user engagement and guide enhancements to the application experience.
- Built Genkit AI workflows, prototyped with Gemini and deployed on Groq for low-latency inference, powering a context-aware player chatbot and automated administrative digests.
- Migrated legacy Firebase prototypes to a production AWS architecture using ECS Fargate, RDS MySQL, ElastiCache Redis, and S3/CloudFront, with Docker Compose for local development parity; scaled the platform to 1,000+ concurrent users and reduced new-tenant setup time by 35%.
- Led CI/CD across multiple repositories, building GitHub Actions pipelines with automated test gates and deployments to Google Play, TestFlight, and Docker environments; established AI-assisted engineering workflows using GitHub Copilot, Cursor, and Claude for task decomposition, implementation, test generation, and code review, with automated tests and human validation governing changes.

CIS Peer Tutor | Dec 2023 - Apr 2026

Bellevue University - Bellevue, NE

- Mentored 100+ students in Python, JavaScript, database design, and software engineering principles.
- Conducted code reviews focused on Clean Code practices, test-driven development, and system design fundamentals.
- Created structured review materials and database design rubrics adopted across multiple CIS course sections.

Junior Web Developer / IT Support Specialist | Oct 2022 - Nov 2023

Pierson Wireless - Omaha, NE

- Developed internal business applications using .NET technologies (C# and Blazor) with SQL Server, deployed through Azure CI/CD pipelines.
- Launched a web-based cost estimation tool that cut manual quote generation workload by 40%.
- Integrated safety compliance forms, hazard reporting, and a service desk ticketing system into the company CMS.
- Automated user provisioning and directory synchronization (JumpCloud), reducing administrative overhead by 50%; managed endpoint security with CrowdStrike Falcon.

PROJECTS

YourOpoly - *Flutter, Node.js, MySQL, AWS ECS, Redis, Socket.io, Gemini API* | [App Store](#), [Google Play](#)

- Built a community rewards platform that connects players with local businesses through QR/barcode-based check-ins, points, rewards, promotions, and leaderboards.
- Implemented map-based business discovery and location-driven gameplay to connect users with participating businesses and available rewards.
- Developed a background agent service that tracks player activity and generates analytics, with Redis-backed caching to keep leaderboard and activity queries responsive as usage grows.

Multi-Product Admin Platform - *Node.js, React/Next.js, MySQL, AWS*

- Designed a centralized administrative console for managing game logic, permissions, configuration, and platform-level operations across multiple products.
- Implemented a layered administration model separating privileged internal controls from tenant-level self-service capabilities.
- Built shared administrative tooling for YourOpoly and Good Life Bingo, establishing a reusable platform that allows additional products to integrate without requiring a separate administration system.

E-Commerce Application - *Next.js, React, Supabase, PostgreSQL, Stripe, Vercel AI SDK* | [Live Demo](#)

- Built a production-style Next.js 15 e-commerce portfolio demo with Supabase Auth, Postgres, and RLS-backed data models.
- Implemented Stripe Checkout and webhook order persistence with a persistent cart for custom-configured and catalog products.
- Added AI design/admin copilots (Vercel AI SDK + AI Gateway) with pgvector RAG and server-side tool calling, gated behind automated contract evals in CI — treating AI output like any other tested code path.

Django Reservation System - *Django, HTMX, Python, SQLite* | [Live Demo](#)

- Built a booking application with transaction-safe scheduling conflict resolution and automated email workflows.

Multi-Tenant Task Board API - *C#, ASP.NET Core, JWT, Azure, GitHub Actions* | [Live Demo](#), [GitHub](#)

- Built a multi-tenant API in ASP.NET Core to explore EF Core global query filters, enforcing tenant data isolation at the ORM layer rather than in application code, with a GitHub Actions pipeline deploying to Azure App Service.

EDUCATION

Master of Science in Data Science (In Progress, Expected Jun 2028) - Bellevue University, Bellevue, NE

Bachelor of Science in Software Development (Jun 2025) - Bellevue University, Bellevue, NE

Associate of Arts in Computer Programming (May 2023) - Iowa Western Community College, Council Bluffs, IA

HONORS AND AWARDS

Darrel H. Gottsch Endowed Scholarship | DREAM Scholarship | Dean's List | Omega Nu Lambda National Honor Society
